Carts will be allowed to go off the recognised tracks within a quarter of a mile of the area of supply in open areas but only along recognised tracts in closed areas.

Free permits for removal of thorns in cartloads should be obtained by the villagers who are entitled to them, from the Round or Depot Officers as and when required from 1st November to 30th June of each year.

- (3) Removal of Karvi by headloads or cartloads for agricultural purposes.

I.1.9.6.2 PROTECTED FORESTS :

- (1) In the protected forests of any village in the Peint Mahal a cultivator of that village may cut down, lop or pollard for his own use any injaili trees that are not fruit trees in accordance with the rules framed under the Indian Forest Act to regulate cutting and lopping of trees in Protected Forests of that Mahal.

In addition to privileges listed above, this District also enjoys the "Nistar" facilities as per the order of R & FD No. EST. 1564/2239-y dt. 15-1-1969. Under these facilities timber below 60 cm. in girth, firewood and khod timber are sold to villagers in available quantities at concessional rates. The material is to be put to bonafide domestic uses and cannot be sold or bartered.

In the past forest lands were granted to backward class people on Eksali cultivation basis and it is yet to be regularized and are presently under cultivation, details of which are as follows :

- (i) Land under Eksali lease - 1557.120 ha
- (ii) Land under unauthorized cultivation - 4140.947 ha
(1972-78)

These concessions have been granted since long time. Over the years, because of changes in the socio-economic condition prevailing in the forest areas and in the surrounding localities the forests have suffered depletion, because of the ever increasing pressure for firewood, fodder and timber. So there is an urgent need to review these concessions and involve, for the future, a new strategy to regulate, and in some cases to altogether withdraw the particular concession. In light of the latest National Forest Policy (1988) and the Forest Conservation Act 1980, alongwith the Rules made thereunder, these concessions need to be regulated and procedure and criteria for enjoying these privileges need be changed. These concessions including grazing, should remain related to the carrying capacity of forests, of all the general and special concessions listed in preceding paragraph the top priority is to be accorded to those relating to firewood and grazing, because these are the basic needs of rural people.

One of the requirements of the Below Ghat villages is to have tahal (freshly cut leafy twigs), grass and dry leaves for preparing the seed beds for raising the seedlings of Nagali, Paddy etc. This is obtained from lopping of trees in Protected Forests except Teak, Tiwas, Shisam, and fruit trees. But in practice these restrictions are never adhered to resulting in damage both to regeneration and standing trees of the forests. At present status, the forests of this division are unable to meet the grazing and firewood requirements without being getting degraded. Moreover, in the near future also the demand of firewood and fodder is impossible to be met from the forests, because of the huge gap between demand and supply. But the endeavour should be to increase the carrying capacity and firewood potential of these forests.

APPENDIX I.VIII.1

Result Of Sample Tree Enumeration of East Nashik Forest Division

East Nashik forest division is the one of the forest division of Nashik circle and within Nashik civil district. The headquarter is at Nashik. The entire forest area of East Nashik division lies between 19° 57' N to 20° 52' N North latitude and 73° 16'E to 74° 56' East longitude.

The forests of this division are broadly of three types according to different tree zones formed on the basis of climatic and topographic variations. These are as follows:

1. Sub Group 3A - Southern Tropical Moist Deciduous Forests
2. Sub Group 5A - Southern Tropical Dry Deciduous Forests
3. Sub Group 6A - Southern Tropical Thorn Forests

The track is bounded as follows:-

North-West	:- Gujrat State and Peint Taluka of Nashik.
North-East	:- Dhule and Jalgaon Districts of Maharashtra.
East	:- Aurangabad District.
South	:- West Nashik Forest Division.

TOPOGRAPHY:-

The forests in this tract are located on hills of the Western Ghats. These hill ranges have direction either West-East or South-West or North West except that of Sahyadris. The elevation varies from 600 to 1400 metres above Mean Sea Level. The hill slopes are usually steep and in many places precipitous. In the East and South-East of the tract, areas are undulating to leveled. The elevation of these hills is higher towards West as compared to East. Some important hill ranges are Selbaries, Dholbari and Satmalas

The area is drained by Girana, Tambdi, Punand, Aram, Mosam, Panzan, Manyad, Godavari and Kadva rivers.

Forest Area:-According to Management & Legal Status the following are the forest areas figure as on dated 31/3/2010.

Table No-1

The East Nashik forest division consist of nine ranges namely 1) Umbarthan 2) Surgana 3) Kanashi 4) Kalwan 5) Deola 6) Dindori 7) Chandwad 8) Nandgaon and 9) Yeola

The area under Scientific Management as recorded in Shri B.P. Singh's working plan for East Nashik forest division is as under.

Sampling plan of Tree Enumeration

The tree enumeration work was carried out by Survey of Forest Resources, Nashik, from Oct. 2009 to Nov. 2010. The entire East Nashik forest division's area was considered for sampling enumeration plan. The trees are enumerated in girth classes started from 15 cms to 135 cms and above girth at breast height (g.b.h.).

The statistical sampling method namely "Systematic Line Plot Sampling with Random Start" was used for tree enumeration. The plot size 30 meters x 30 meters, was found to be suitable with the least standard error. The complete enumeration of trees, seedlings, coppices were carried out in these plots. Similarly qualitative measurements were also carried out.

Scrutiny of data and preparation of results i.e. (1) Stock per hectare was calculated with the help of computer program. The whole work was carried out by Forest Survey Unit, Nashik under the guidance of Conservator of Forests, Working plan, Nashik and the result are being reported in the form of following statements.

- Statement I : Estimated growing stock-No. of Sound trees.
Statement II : Estimated growing stock-No. of Sound trees per ha.
Statement III : Percentage distribution of total stock of species over all girth classes.
Statement IV : Percentage of stock of species in a girth class to the total stock in that particular girth class.
Statement V : Estimated growing stock in volume in cu.m./ha

Some noteworthy result on current enumeration is described in following Table.

Table No. 4 (a)
Statement showing estimated no. of trees per ha. for Past and Current tree enumeration

As the previous enumeration were carried out in two different periods over separate areas and also the area considered for previous enumeration has been changed due to reorganization of then East Nashik division(Carving out Malegaon Sub-division), the weighted averages of previous enumerations and weighted average of current enumeration are not comparable.

It is also worth to note that in the current enumeration in all the 4 working circles more than 55% of trees are in lower most girth classes i.e. 15 U 30 and 30 U 45. This is evident from the following table.

Table 4 (b)

Estimated percentage of trees in 15 U 30 and 30 U 45 girth class.

It is also necessary to mention that, Ain is the second largest specie after Teak in Protection, Improvement and Afforestation working circles in the total estimated stock.

Statistical Analysis: -

The Statistical personnel of the office of the Chief Forest Statistician, Maharashtra State, Nagpur, have carried out the statistical analysis of the data. The calculated estimates lead to certain error and percentage of standard error is around 5% for Improvement and Afforestation Working Circle, in the statistical analysis. The percentage of standard error is calculated for each W.C. is as given in following table number 7.

APPENDIX II.VII.1

TAPPING RULES BY F. R. I. DEHARADUN

Tapping Rules : The rules for tapping, derived by the F.R.I., Dehra Dun are given as follows :

- i) The tapping season will commence from November to end of May each year. No tree below 90 cm. in girth will be tapped.
- ii) Tapping will be confined to the main bole of trees between 15 cm. from ground level to the point from which first branch is given off.
- iii) Only trees above 90 cm. in girth at breast height will be tapped.
- iv) Each tree will be tapped continuously for 3 years and will be given a rest for 3 years thereafter. The second tapping cycle will begin in the 7th year after the commencement of tapping season and will continue for another period of 3 years.
- v) The initial blaze of 20 cm wide and 30 cm in length or height may be made in the month of November on trees at 15 cm. above ground level with a sharp adze having 7.5 cm. wide blade. The blaze is made 0.6 cm. deep in the bark.
- vi) Blaze may be made horizontally leaving approximately equal space between the blazes. The blazes should not have any loose fibre. The lower surface of the blaze should be slightly slopping outwards to avoid lodging of guggul in the blazed pocket in case initial blazing is done by adze.
- vii) The guggul starts oozing out soon after blazes are made and may be collected initially after a month i.e. by about December when the blazes may also be freshened. Subsequent collections and freshening may be done at fortnightly upto May. Thus 12 freshening may be required to be made during the year.
- viii) In each freshening, the lower surface is not to be freshened. The edges may be scraped so that only 3.8 cm. is increased on either side in width at the end of 12 freshening. This means that about 0.3 cm. should be scraped off either side in width in each freshening.
- ix) The lowest row of blazes will be at one metre above the ground level. The next row of blazes will be made at the height of 60 cm. from the lower i.e. at a total height of 1.6 metre from the ground level. The vertical portion of the blaze of upper row; will alternate with similar portion of the row and no two blazes of the two rows will be directly one above the other.
- x) The number of blazes to be made on each tree will depend on its girth at breast height as given below :

TABLE

Sr. No.	Girth at breast height	Max. no. of blazes to be made on each tree.
1.	0.9 m to 1.3 m	2
2.	1.3 m to 2.0 m	3
3.	2.0 m to 3 m	4
4.	Over 3 m	1 blaze for every 45 cm girth in addition to category 3 above.

- xi)** No fresh blaze will be made on the partially healed up surface or old wounds.
- xii)** Each blaze will be in a shape of parabola with a 2.5 cm. wide base. The curved side of the parabola will be upwards and of height not more than 7.50 cm. and the depth of the blaze will not exceed 0.6 cm. in the wood.
- xiii)** At the end of the season, the height of the blaze shall not be greater than 12.50 cm. Maximum permissible dimension of each blaze shall be 10 cm. x 12.5 cm. x 0.6 cm. in width, height and depth respectively.
- xiv)** Since the tapping is to be done continuously for three years the total height of the blaze at the end of three years of tapping will be 37.5 cm., the width and depth remaining the same.

In the second cycle i.e. in the 7th year (after three years rest) new blazes will be made in the same way in the unblazed portion, in between the blazed portions of the first cycle. This blazing will continue for another three years in the manner described above and the operation will be repeated till unblazed portion is fully covered.

4. केंद्रशासनाचे पत्र क्र.डीओ/21.1.7/99/बी-2 दि. 31.5.2002

निर्णय-

राष्ट्रीय वननीती 1998 अन्वये वनसंरक्षणामध्ये आणि वनविकासासाठी स्थानिक लोकांचा सहभाग अभिप्रेत आहे. त्यानुषंगाने केंद्र शासनाच्या पर्यावरण आणि वन मंत्रालयाने सर्व राज्य शासनांना दिनांक 1/8/1990 च्या मार्गदर्शक तत्वान्वये स्थानिक लोकांच्या सहभागाने वनव्यवस्थापन करण्यासाठी एक योजना तयार करावी अशी सुचना केली होती. केंद्र शासनाच्या सुचनेचा विचार करून महाराष्ट्र शासनाने ग्रामीणांच्या सहभागातून वनव्यवस्थापने बाबत योजना राबविणेचा निर्णय घेतला आहे.

2. आता केंद्र शासनाने दिनांक 21/2/2000 व दि.31/5/2002 च्या मार्गदर्शक तत्वान्वये या कार्यक्रमात चांगली वने घेणे, तसेच स्त्री वर्गाचा जास्त सहभाग प्राप्त करणे, इत्यादी बाबत सूचविलेले आहे.

सदर मार्गदर्शक तत्वांचा संखोल अभ्यास व विचार करून राज्य शासनाने पूर्वी निर्गमित केलेले दिनांक 16/3/1992 व 8/7/1994 चे शासन निर्णय अधिकृत करून या कार्यक्रमाबाबत खालील प्रमाणे सुधारीत निर्णय घेतलेला आहे. ग्रामीण परिसरातील अपगत व अवन्त व वनेत्तर क्षेत्राचा उपयोग या कार्यक्रमासाठी प्रामुख्याने केला जाईल. तसेच कार्यक्रमांतर्गत वनपडिक (Forest Wet Land) जमिनीचा सुध्दा अंतर्भाव राहील. सदर कार्यक्रमांमध्ये 40 टक्केच्या वर घनता असलेली वने (यापुढे अशा वनांना चांगली वने असे नमुद करण्यात येईल) ही घेण्यात येतील. सुरुवातीस 2 कि.मी. अंतराच्या आत ज्या गावांचे चांगले वनक्षेत्र आहे, अशा गावांचा प्रायोगिक तत्वावर या कार्यक्रमांमध्ये अशी वने घेण्यासाठी समावेश करण्यात येईल नंतर टप्प्या- टप्प्याने उर्वरित चांगली वने असलेल्या गावांचा विचार सदर कार्यक्रमासाठी करण्यात येईल तथापि संरक्षित क्षेत्रे (राष्ट्रीय उद्याने व अभयारण्ये यांचा समावेश असलेली क्षेत्रे) यांचा उपयोग या कार्यक्रमासाठी करता येणार नाही पुढे हे कार्यक्रम स्थानिक ग्रामपंचायतीच्या सहाकार्याने राबविले जाणार असून याद्वारे मिळणारे वनोत्पादन स्थानिकांच्या दैनंदिन गरजा भागविण्यासाठी अग्रक्रमाने उपलब्ध करून दिले जाणार आहे. त्यामुळे त्यांच्या हक्कांवर बंधने येऊ नयेत. म्हणून खाजगी व्यक्ती अथवा संस्था तसेच वनोपजावर आधारित औद्योगिक प्रतिष्ठांताना करारनाम्यानुसार दिलेले क्षेत्र या कार्यक्रमातून वगळण्यात येईल.

गावाच्या परिसरातील वनेतर क्षेत्र जर मुबलक प्रमाणात उपलब्ध असेल अथवा ते वनक्षेत्राशी संलग्न असेल व या कार्यक्रमांच्या अंमलबजावणीसाठी या वनेत्तर जमिनीची गरज असेल तर अशा जमिनीचा अंतर्भावही यासाठी करता येईल. तसेच ग्रामस्थांनी व ग्रामपंचायतींना

जमिनीची गरज असेल तर अशा जमिनीचा अंतर्भावही यासाठी करता येईल. तसेच ग्रामस्थांनी व ग्रामपंचायतीना सहमती दिल्यास गट लागवडीसाठी असलेल्या क्षेत्रात ही योजना राबविता येईल. मात्र हयासंदर्भात ग्रामसभेमध्ये ठराव घेणे आवश्यक राहिल.

स्थानिक नागरीक, स्थानिक स्वराज्य संस्था, स्वयंसेवी संस्था आणि पर्यावरण तज्ञांच्या सहभागाने तथा सहकार्याने क्षेत्रातील नागरी परिसरातील वनक्षेत्र आणि वनक्षेत्र पडिक क्षेत्रावरही वनोपजाच्या भागीदारीच्या तरतुदीविना सुधारीत रूपामध्ये या कार्यक्रमाची अंमलबजावणी करता येईल.

या कार्यक्रमाचे एक उद्दिष्ट वनाजवळ राहणा-या ग्रामीणांच्या दैनंदिन वनोत्पादनाच्या गरजा भागविणे असे आहे. म्हणून या कार्यक्रमात वनक्षेत्रात जोड कृषि उत्पादन अभिप्रेत नाही. तथापी मंजूर सुक्ष्मयोजनेतील तरतुदीप्रमाणे अवनत व अपगत वनक्षेत्रात कोरडवाहू फलोत्पादनासाठी परवनगी देता येईल. तसेच सदर कार्यक्रमाचे उद्दिष्ट वन तथा वन्यप्राण्यांचे संवर्धन लोकांच्या सहभागातून अभिप्रेत असल्यामुळे वनसंवर्धन अधिनियम 1980 च्या तरतुदींना बाधा येईल. असे कोणतेही करारनामे व्यक्ती, संस्था अगर ग्रामपंचायतीशी केले जाणार नाहीत.

नागरी क्षेत्रात वन आणि वनेत्तर क्षेत्रावर परिसर विकासाची कामे करण्यासाठी उपवनसंरक्षकाच्या अध्यक्षतेखाली संयुक्त वन व्यवस्थापन (नागरी क्षेत्र) समितीची स्थापना करण्यात येईल. सदर समितीचे सभासद प्रत्येक लगतच्या वार्डातून 2 पेक्षा जास्त राहणार नाहीत. या त-हेने सदस्यांची संख्या व्यवस्थापनेच्या मर्यादेत ठेवण्यात येईल.

केंद्रशासनाने दि.31/5/2002 च्या मार्गदर्शक सुचनान्वये संयुक्त वन व्यवस्थापन समितीचे गठन करण्याबाबत काही निर्देश दिले आहेत. केंद्र शासनाने सुचविल्याप्रमाणे व राज्यातील परिस्थिती विचारात घेउन, संयुक्त वन व्यवस्थापन समितीचे गठन करण्यात येत आहे. यानुसार संयुक्त वनव्यवस्थापन समितीमध्ये खालीलप्रमाणे दोन समित्या असतील

APPENDIX II.XII.4

BRIEF NOTE ON STUMP PLANTING STOCK

STUMP OR ROOT-SHOOT PREPARATION

The beds should be made thoroughly wet before uprooting which are required for making root-shoot cuttings. For this as above one trench is made at one end of bed and uprooting is started from that end so that plants are not cut or damaged. For Teak and sissoo, etc., the stump planting has been found to give better results as compared to seedlings or transplant planting. The uprooted seedlings are washed to free it from soil. The washed seedlings are cut sharply just above the collar and at the thinner end of root length of stump varies from 15 to 30 cm with collar thickness 1-2 cm. The stumps so prepared are bundled and packed in moss, gunny bags or polythene. The stumps should remain moist throughout until they are planted.

GRADING OF PLANTING STOCK

Before transporting the planting stock e.g. root-shoot and polypots, they should be graded. Before grading the number of stocks required for actual planting is correctly estimated so that the number of surplus stock is known. The seedlings of plantable size are first graded into three categories. The seedlings may be graded according to (i) age (ii) height (iii) root-shoot ratio or (iv) health and vigour of the plant. The inferior stocks are scaled **culls**.

The objectives of the grading should be :- (a) to eliminate culled, diseased and damaged seedlings (c) to segregate the plantable stock into two or three grades so that good seedlings may be planted at important locations. The seedlings should have well proportioned or balanced root-shoot ratio. Medium stock between 50 to 60 cm height with a woody root collar show better survival than smaller plants. The grading for root-shoot can not be done all at one time. The sub-standard or eliminated planting stock should not be thrown away. These seedlings should be given more time to grow. Similarly the stumps should be put in the polybags during monsoon. After one month these stock can be used for beating up of casualties or as the contingencies demand.

The quality of seedlings can be measured by two factors viz.(i) by the genetic make-up of the parent stock, and (ii) physical growth of plant . The genetic traits depend on the seed collection site therefore, seed collection should be made from the best possible site. The physical growth is very well under the control of nursery incharge .

The root-shoot ratio of the planting stock should be proper. A seedling having large shoot but small root is likely to fail after planting due to dessication. The healthy and vigorous stock should be planted first as they will perform well after planting.

MANAGEMENT OF PESTS IN NURSERIES

In a forest nursery the aim is to produce healthy planting stock. This can be done by (i) Better nursery management practice and (ii) Control of biological deterrents. The biological deterrents are the most damaging factor causing large scale mortality, or poor growth of seedlings. They include insect pests such as white grubs, cutworms, crickets, termites, leaf feeders, sapsuckers and non-insect pests such as nematodes and rodents. They cause serious damage to the seedlings. The various measures that are taken for the control of nursery pests are-

- (a) Better sanitation of the nursery area.
- (b) Adoption of suitable cultural practices.
- (c) Need based application of chemicals.

The forest nursery pests are classified into three groups:-

- (1) MAJOR NURSERY PESTS (soil insect pests) (a) White grubs (b) Cutworms (c) Termites.
- (2) MINOR NURSERY PESTS (a) Defoliators (b) Grasshoppers (c) Crickets (d) Sapsuckers.
- (3) NON-INSECT PESTS (a) Nematodes (b) Rats and other rodent pests.

WHITE GRUBS ATTACK

They are also known as “Chafer beetles, May and June beetles, Cockchafer, or simply chafers”. Larvae of some chafer species cause damage to plants seriously whenever the soil is light and the climate is moderate. According to their food habits white grubs are divided into three groups viz.

- (1) Grubs living in excrement of mammals and feeding on the same are called dung beetles, e.g. Aphodius, Copris. Etc.
- (2) Grubs feeding on dead organic matter or living in humus rich soil. They also occur in nursery beds of some species. The beetles are day fliers and feed on foliage or flowers e.g. Anomala, Mimela (some spp.) and Popila.
- (3) Grubs feeding on living roots of plants. The beetles are nocturnal and feed at night. E.g. Anomala (some spp), Apogonia, Granida, Holotrichia and Melolontha. This third group is the true root grubs and can destroy root and rootlets of seedlings in nurseries and also young plants in the field.

The chafer beetles have nearly one year life cycle with a long larvae period of 8 to 10 months but they have about two years of life cycle in temperate regions (above 2,000 m elevation). The beetles come out of the soil from April to June. They come out at 7 p.m. to 8 p.m, in the evening. They congregate on the available vegetation e.g. neem, babul, ber etc. They remain

active during the clear nights and feed on the foliage of the host plant. They generally avoid barren, dry and gravel soils and prefer moistened loose sandy or loamy soils for oviposition. A single female lays nearly 30 to 60 eggs. The grubs occurring in manure pits, compost or decayed organic matter do not feed on plant roots and are mistaken for true root grubs because they are similar to plant root feeders.

The pupation occurs during the winter months (Oct-Jan). The sandy or sandy loam soils are preferred for pupation. The adult chafer beetles are good fliers, and are of various colours e.g. brown, black, blue, grey or orange depending upon the species. The adults are only defoliators and feed on leaves and flowers of trees in nearby areas of nurseries or plantations. They do not cut large veins or margins. The grubs cause direct injury to plants by chewing roots and rootlets or removing the bark of the tap-root of seedlings. They also damage the nodules or removing the bark of the top-root of seedlings. They also damage the nodules in leuminous plants. The shallow rooted plants are damaged by root injury by their tunneling activities.

Holotrichia consanguinea and *Holotrichia serrata* are prominent and cause immense damage to teak seedlings in M.P. and Maharashtra.

Since there are large number of white grub species which vary a great deal in their habits, the control measures adopted are not species-specific but a general one. The control measure is given below.

Deep ploughing to expose the grubs to predators and sunlight. The seed beds should be prepared one month before swarming of beetles and while preparing beds the grubs should be picked up and destroyed. The soil should be compacted by watering and patting.

STUMP PLANTING-

The great advantage of root-shoot or stump planting is that they are immune to damage while handling, transport and planting. In case of failure or gap in the rains very little damage is caused to plants. The cost of nursery operation is very less as polythene bags are not required and very less earth work is involved. Stumps can be transported to long distances without fear of loss of vitality because stumps have reserve food material in the collar. The stumps must be planted during pre-monsoon showers.

In light soils the stumps are planted by making crow bar holes in the soil but in heavy soils the pits would be desirable. The position of collar-tip is kept at the ground level or somewhat below when planting and it is covered with soil and compacted. The crow-bar holes should not be bigger than the stumps and the soil should be well compacted otherwise stumps are likely to rot due to accumulation of water in between the gap. In black cotton soil

get sticky when wet and does not easily allow stumps to sprout even after rains . If the tip is covered with soil, it will result in heavy failure. Treading must be done firmly after stump planting.

Stump planting is not possible in dry climates . Similarly if there are no early premonsoon shower or if the rains start late or there is a dry spell during early monsoon or if the planting is delayed there will be heavy casualty in stump planting and shoot development and growth is restricted as compared to polypot seedlings.

In case of accidental gap in the rains the planted stumps must be well covered with soil to avoid damage due to direct sunlight. All the stumps must be planted maximum within seven days from the date of first monsoon shower.

केंद्रीय वन मंत्रालयाने त्यांच्या दि. २९/१०/२०१० च्या पत्रान्वये पंचायत (अनुसूचित क्षेत्रात विस्तारीत) अधिनियम, १९९६ लक्षात घेउन संयुक्त वन व्यवस्थापन समित्या ग्रामसभेच्या अखत्यारीत आणण्याबाबत काही सुनचा दिलेल्या असुन सदरहू सुचनेच्या अनुषंगाने त्याचप्रमाणे वन हक्क अधिनियम अंमलात आल्यामुळे संयुक्त वन व्यवस्थापन समितीच्या कार्यक्रमाध्ये बदल करणे आवश्यक असल्यामुळे संयुक्त वन व्यवस्थापन समितीचे बळकटीकरण व ग्रामसभेला जोडण्याची बाब शासनाच्या विचाराधीन होती. याशिवाय वन पर्यटन वाढत असले तरी वनक्षेत्रातील किल्ले व निसर्गरम्य ठिकाणांवर कोणाचेही नियंत्रण नसल्यामुळे ना-दुरुस्त झालेले असल्यामुळे व सर्व परिसरामध्ये पर्यटकांकडुन कचरा टाकण्यात येत असल्यामुळे त्यांचे रक्षण व संवर्धन होणे आवश्यक आहे. म्हणुन वनक्षेत्रावरील बांबुवरील अधिकार आणि जलस्त्रोत, प्रपात, पाणवठे, गड, किल्ले इत्यादी आकर्षक असणा-या पर्यटन स्थळानां भेट देणा-या पर्यटकांवर नियमन या बाबी देखील ग्रामसभा व त्या अंतर्गत स्थापन होणा-या संयुक्त वन व्यवस्थापन समितीकडे देण्याचे देखील विचाराधीन होते.

APPENDIX II.XV.12
ESTIMATE FOR R.C.C. BOUNDARY PILLARS AND ITS DESIGN
प्रधान मुख्य वनसंरक्षक महाराष्ट्र राज्य नागपुर यांचे कार्यालय

ज्ञापन

विषय- वनक्षेत्राचे सिमांकना करीता
आर.सी.सी. पिल्लरचे डिझाईन
व अंदाजपत्रक पुरविण्याबाबत.
जा.क्र.व.सं/भु.अ./६८/२००१-०२
नागपुर - ४४० ००६ दिनांक २९.५.२००१.

वनसंरक्षक सर्व (प्रादेशिक) यांना कळविण्यांत येते की, सध्यास्थितीत वनविभागामध्ये वनसंहितीतील तरतुदीनुसार वर्ग-१ व २ चे दगडी बुरुजाद्वारे सिमांकनाचे काम करण्याची पद्धत अवलंब देण्यांत येत आहेत. तथापी संवेदनशील क्षेत्रात असे बुरुज सुस्थितीत ठेवणे दिवसें दिवस जिकीरीचे झालेले आहे. त्यामुळे या बाबीचा मुख्यवनसंरक्षकाच्या सभेमध्ये विचार होवुन अशा संवेदनशील क्षेत्रात ठराविक आकाराचे आर.सी.सी. पिल्लर सिमेंट काँक्रीट मध्ये रोवुन सिमांकनाचे काम करण्यांत यावे असे ठरविण्यांत आलेले आहे.

२.०० त्यामुळे भुमी अभिलेख कक्षातर्फे सुचविण्यांत आल्यानुसार वन अभियंता म.रा.नागपुर यांचेकडुन पुरविण्यांत आलेले १.४० मीटर लांब (जमीनीवर १ मीटर उंच) व ०.९० मीटर लांब (जमीनीवर ०.५ मीटर उंच) अशा प्रकारच्या आर.सी.सी. पिल्लरचे डिझाईन व त्यांचे नमुना अंदाजपत्रक सोबत जोडुन पुढील कार्यवाहीकरीता पाठविण्यांत येत आहेत. तथापी स्थानीक क्षेत्रीय परिस्थिती व स्थानीक डी.एस.आर. चे दरपत्रकानुसार प्रत्येक क्षेत्राकरीता वेगळे सविस्तर अंदाजपत्रक बनविणे आवश्यक राहिल.

३.०० वनक्षेत्राच्या सिमांकनाचे काम करतांना कोणत्या प्रकारचे खांब किंवा बुरुज वापरण्यांत यावेत याबाबत पुढील सुचना लक्षात घ्याव्यात.

३.०१ जेव्हा दोन वनविभागाच्या क्षेत्रामधील हद्दीचे सिमांकन करावयाचे असेल व दोन्ही बाजूला वनक्षेत्र असेल अशा वेळी दगडी बुरुजाद्वारे सिमांकन करण्याच्या सध्याच्या प्रचलित पद्धतीचा वापर करण्यांत यावा.

३.०२ संवेदनशील वनक्षेत्रांचे सिमांकन करतांना पूर्णतः १.४० मीटर लांबीच्या आर.सी.सी. पिल्लरचा वापर करण्यांत यावा आणि दोन पिल्लर मधील अंतर केवळ ५० मीटर असावे. अशा प्रकारच्या सिमांकनाची आवश्यकता मुख्यतः जेथे वनक्षेत्राची सीमा खाजगी क्षेत्राला लागुन असेल त्या ठिकाणी राहिल.

३.०३ ज्या ठिकाणी वनक्षेत्राची सीमा महसुल क्षेत्रास किंवा इतर शासकीय जमानीस लागुन असेल अशा वेळी १.४० मीटर लांबीचे आर.सी.सी. पिल्लर १००-१५० मीटर अंतरावर

रोवुन त्यांच्या मध्ये ३०-४० मीटर अंतरावर ०.९० मीटर लांबीचा आर.सी.सी. पिल्लरचा वापर करण्यांत यावा.

४.०० सिमांकनाचे ठिकाणी आर.सी.सी. पिल्लर रोवण्याकरीता निविदा मागवितांना सदरचे पिल्लर सिमांकनाच्या जागी काँक्रीट मध्ये रोवुन त्यांना पुढे सात दिवस 'क्युरींग' करण्याची अट सुध्दा त्यात अंतर्भूत करण्यांत यावी.

तसेच वरील प्रमाणे कोणतीही कामे करतांना संबधीत सक्षम अधिका-याकडून तांत्रिक व प्रशासकीय मंजूरी घेवुन मगच निविदा मागवाव्यात आणि सदरच्या निविदाना सक्षम अधिका-याकडून मंजूरी घेवुन नंतरच प्रत्यक्ष कामांस सुरुवात करावी. निविदा मागवितांना महाराष्ट्र वानिकी प्रकल्पातर्गत निविदा मागविण्याच्या पध्दतीचा अवलंब करावा. तसेच निविदा बाबतचा खर्च १/५ सिमांकन योजनेतर (नॉन प्लॅन १/५ बाँडरी डिमार्केशन) या शिर्षाखाली वितरीत अनुदानातून करावा.

वरील सर्व गोष्टींना बराच कालावधी लागण्याची शक्यता आहे. याचा विचार करता आणि पावसाळा संपताच म्हणजे आक्टोंबर मध्ये सिमांकनाचे प्रत्यक्ष काम सुरु होण्याची अपेक्षा आहे. त्या दृष्टीने जरूर ती सर्व पुर्व तयारी आधीपासुनच करून ठेवावी यामुळे शासनाकडून अनुदान प्राप्त होताच शिघ्र गतीने कामे सुरु करून पुर्ण करता येतील. यासाठी वरीलप्रमाणे कार्यवाही अपेक्षित आहे. आजच्या परिस्थितीत सिमांकनाची कामे जानेवारी अखेर पुर्ण होतील या दृष्टीने सर्व कामाची आखणी करावी.

तसेच एक धोरणात्मक निर्णय म्हणुन यापुढे १/५ सिमांकन कामात सुध्दा 'आर.सी.सी.' पिल्लरचा वापर वरील मुददा क्र. ३.०१ ते ३.०३ मध्ये दर्शविल्याप्रमाणे करावा.

केलेल्या कार्यवाहीचा पुर्तता अहवाल दरमहा महीना अखेर या कार्यालयास पोहचेल या बेताने पाठविण्यांत यावा.

सहपत्र - वरीलप्रमाणे.

65	Strychnos potatorum	Nirmali Nelmal	(a) By Seeds - Seeds are collected during Feb to March. The pulp is washed off to obtain the seed and dried in shade. The seed viability is very low.	eye disease
66	Symplocos racemosa	Lodh	(i) Seed productive:- Flowering occurs in Dec to Feb, and fruit and seed setting March-May. Seeds are sown in polyhouses in seed pans and seed trays and germinate in 45 days, Germination is poor and it is about 5% only (ii) Vegetative propagation:- Semi soft wood cuttings 1 x 25 to 25 cm are treated with 500 ppm IBA to induce, rooting. The cutting can be planted in poly houses or poly tents in September - December Cutting require 80 to 90 percent humidity and 30-35 degree celcius temperature, Sprouting time 2 to 3 weeks.	Diarrhoea, dysentery lever
67	Tinospora cordifolia	Amrut	(i) Seed propagation : Flowering and fruiting occur between January, March seeds soaked in coldwater for 24 hours give a better and faster germination percentage.	Cardiac, debility Skin disease, jaundic

			The treated seeds are sown in polybags in May-July. Germination takes about 10 to 12 days and it is about 80 to 90%. But only 30-35 % germination is obtained, if the seeds are sown without pretreatment of water. The seedlings are maintained in nursery for duration of up to one and a half month. ii) Vegetative propagation: - In the first year, support plants of this climber have to be grown. When these plants are about one year old, cutting of <i>Tinospora cordifolia</i> have to be planted inside it. Semi hard wood cutting of pencil thickness 10 to 15 cm long, with 4 to 8 nodes are planted in polythene bags in a slanting manner with two nodes inside the soil mixture in June-July. Nearly all cutting "root" in about 20 to 30 days and 90% is the result in 45 days	
68	<i>Tribulus terrestris</i>	Nerungil Nerinnil	Seed Propagation: - Seeds are collected in December. The fruits are crushed to release the seeds. Seeds are sown in the month of May-June in polybags. Seed germinate takes about 10 to 15 days and 80% seed germinates.	cough
69	<i>Vetiveria Zizanioides</i>	Khas	Vegetative propagation:- (a) Through slips:- Slips are collected and planted directly in nursery beds in rainy season. The top portion of the slip is cut down, before planting to prevent transplantation loss.	colic, vomiting, Asthma
70	<i>Vitex trifolia</i>	Nocci, Nimosch	Vegetative propagation: - Stems older than one year, or partially hardened shoots are used for layering. As many active leaves as possible are left on the shoot to facilitate speedy, rooting. The first step is to girdle or cut the bark of the stem, give a slanting upward cut on: one or both sides of the	Cough and fever, loss of hair

			stem about 3 cm long. About two handful of moistened moss should be placed around the cut surfaces. A thin polythine film is wrapped to cover the moss, completely, so that the rooting occurs.	
71	<i>Withania somnifera</i>	Amukkuran, Devethi	Seed propagation: - Flowering occurs in July -September and fruiting in November-December. The seeds are washed to remove mucilage and dried in sunlight Prior to sowing the seeds are soaked in cold water 24 hours. Seeds are directly sown in the main field by broadcasting and covered with light soil. Sowing is taken up in Oct-January or from July to September. In 6 to 7 days seeds germinate and 80% germination is obtained.	Insomnia, nervous Break down fever.
